Aim

To be the first player to place 5 counters in a row, column or diagonal.

Equipment

- 2 × Spinners
- 5 × transparent 19 mm counters in two different colours.

Rules

- Players take turns to spin each spinner.
- Players double the **number** by the **number of doubles**.
For example, if a **2** and **1** was spun, a player would double 2 to make **4**. However, if a player spun **2** and **2**, they would double 2 then double 4 for a total of **8**.
- Find the total and place a counter on that space. If the other player's counter is already on a space that matches the total, the player can place their counter and 'bump' that counter off.
- The first player to place **5 counters in a line** wins.
